📍 Brazil | Open to Global Remote

PROFESSIONAL SUMMARY

Senior DevOps Engineer with over 5 years of experience in cloud infrastructure, Kubernetes, CI/CD automation, Infrastructure as Code, and reliability engineering. Experienced in building and operating scalable, secure, and reliable environments across AWS, Azure, and GCP using Kubernetes, Terraform, Docker, Helm, ArgoCD, and modern DevOps toolchains. Strong background with international projects and global enterprise environments, with a focus on observability, GitOps, incident response, and automation to improve operational efficiency and system reliability.

WORK HISTORY

Site Reliability Engineer (SRE), Oct 2025 - Present

SAP (by HCLTech), Palo Alto, California, United States (Remote from Brazil)

Supported production environments across GCP and hybrid infrastructure, collaborating with global SRE teams to maintain service reliability and resolve incidents.

Investigated production incidents using Splunk and Dynatrace, correlating application logs with infrastructure changes to accelerate troubleshooting and root cause analysis.

Developed AI-assisted automation workflows using Claude Code to streamline incident investigations, operational tasks, and knowledge retrieval across Jira and internal documentation.

Cloud Platforms: GCP

Tools and Technologies: Bash, Linux, Git, GitHub, Claude Code, Jenkins, Jira, HashiCorp Vault.

Observability: Splunk, Dynatrace.

DevOps Engineer, Sep 2024 - Oct 2025

Objective, Maringá, Paraná, Brazil

Automated infrastructure provisioning and application deployments across AWS and Azure using Terraform, Jenkins, and TeamCity, implementing reusable modules and CI/CD pipelines.

Implemented GitOps practices using ArgoCD and Helm, enabling declarative, version-controlled Kubernetes deployments across multiple environments.

Contributed to the migration of on-premises workloads to Azure, supporting containerization and Kubernetes-based infrastructure.

Implemented an observability stack using Grafana, Prometheus, Loki, Tempo, and Mimir, improving monitoring, logging, and distributed tracing across Kubernetes environments.

Optimized cloud costs using OpenCost to identify overprovisioned Kubernetes workloads and eliminated redundant Azure Monitor telemetry ingestion after migrating to the Grafana stack.

Collaborated with international clients and cross-functional teams, communicating in English to deliver cloud infrastructure and DevOps solutions.

Mentored and onboarded a new team member, providing technical guidance on DevOps practices, tools, and project workflows.

Upgraded production Kubernetes clusters, aiming for zero downtime while maintaining high availability and service reliability.

Participated in incident response and troubleshooting of production environments, conducting post-mortem analyses to identify root causes, prevent recurrence, and improve system reliability.

Cloud Platforms: Azure (ACR, AKS, Azure Files, Entra ID); AWS (Cognito, CloudWatch, Lambda, DynamoDB, CloudFront, API Gateway, CloudTrail, Kinesis Data Firehose, SES, IAM, S3, WAF, EKS).

Tools and Technologies: Bash, Linux, Docker, Docker Compose, NGINX, Envoy, Kubernetes (Minikube, Kind, AKS, EKS), Helm, ArgoCD, Jenkins, TeamCity, GitHub, GitLab, GitLab CI, GitHub Actions, Bitbucket, Terraform, HashiCorp Vault, Nexus, External Secrets, JFrog, Maven, Kotlin, RabbitMQ, OWASP Dependency-check, Jira, SonarQube, Trivy, XWiki, Confluence, Kanban.

Observability: Grafana, Prometheus, Loki, Tempo, Mimir, Alloy, OpenCost.

Cloud Backend Engineer, May 2021 - Aug 2024

Radio Memory, Belo Horizonte, Minas Gerais, Brazil

Automated AWS infrastructure provisioning using Terraform and GitHub Actions, reducing manual configuration and standardizing infrastructure deployments.

Developed and maintained containerized Python APIs using Flask, FastAPI, and Docker, supporting machine learning workloads deployed on AWS.

Migrated a machine learning inference workload from AWS Lambda to ECS, reducing startup latency from approximately 30 seconds to 4 seconds.

Implemented CI/CD pipelines to automate application builds, testing, and deployments across AWS environments.

Mentored and trained two interns in Python development, AWS, and DevOps practices, supporting their technical development and onboarding.

Cloud Platforms: AWS (API Gateway, EC2, ECS, EBS, EFS, S3, Lambda, SQS, SNS, CloudWatch, XRay, Route53, VPC, IAM, Secrets Manager, Elastic Load Balancer).

Tools and Technologies: Python, Go, Bash, Jenkins, Terraform (IaC), Flask, FastAPI, Pytorch, Numpy, Keras, Pytest, Docker, Docker-Compose, Git, ClearML, Trello, Streamlit.

CERTIFICATIONS

Google Cloud Associate Cloud Engineer

AZ-400: Azure DevOps Engineer Expert

AZ-104: Azure Administrator Associate

AZ-900: Azure Fundamentals

AWS Solutions Architect Associate

AWS Developer Associate

AWS Cloud Practitioner

EDUCATION

2016 - 2023 | Bachelor's Degree in Mechatronics Engineering

University of Brasília (UnB)

Final Project: "Reinforcement Learning applied to VSSS category of Robotic Soccer". (Designed an autonomous agent able of scoring goals through machine learning, Python and Pytorch)

2014 - 2017 | Technician's Degree in Electrotechnics

Technical School of Brasília (ETB)

LANGUAGES

French: Beginner

Spanish: Intermediate

English: Advanced

Portuguese: Native

VOLUNTEER WORK

2018 - 2022 | UnBall Team - Robot Soccer

Competition Team (Autonomous Robots)

Applied Agile methodology and Scrum framework for project management.

Managed financial operations and prepared monthly reports for project contributors.

Developed Python scripts and machine learning algorithms for autonomous robot soccer systems.

Used Linux for software development, robotics programming, and system execution throughout the project.

During the COVID-19 pandemic, helped adapt the team infrastructure for remote robotic competitions by developing and running containerized environments using Docker.

2017 - 2019 | Teaching Assistant at Universit of Brasilia (UnB)

2019 | Introduction to Linear Algebra

2018 | Calculus 3 (Multivariable Differential and Integral Calculus)

2018 | Calculus 2 (Series and Differential Equations)

2017 | Algorithms and Computer Programming

PAPER PUBLICATIONS

2023 | Minimal underactuated synchronization with applications to secure communication
Journal: **Communications in Nonlinear Science and Numerical Simulation (Qualis A1)**

PERSONAL PROJECTS

GitOps AKS Platform

Designed a GitOps-driven Kubernetes platform using Terraform, ArgoCD, Helm, and Kustomize. Implemented automated deployments with ArgoCD ApplicationSets, environment-specific configurations, and Git-based access controls. Integrated Istio, Prometheus, and Kubernetes resource policies to support secure, scalable, and observable cloud-native infrastructure.

Go DevOps Monitoring Stack

Built a complete observability and deployment stack using Go, Docker, Docker Compose, NGINX, Prometheus, Grafana, and Ansible. Implemented a containerized HTTP service with reverse proxying, metrics instrumentation, dashboard provisioning, and automated infrastructure deployment through a single Ansible playbook.

Splunk SPL Exercises

A collection of SPL (Splunk) queries and hands-on exercises demonstrating log analysis, incident detection, and monitoring skills.

Database for Social Network

Utilized Br Model for developing Entity-Relationship and Relational Model diagrams. Applied relational algebra for query applications. Table normalization and use of PostgreSQL as engine.

SQL Data Analysis

Advanced SQL techniques for obtaining Insights in a public relational database.

Personal Website hosted on AWS

Developed my personal website using Angular, HTML5, CSS3, SASS, with automated infrastructure provisioning and deployment on AWS via Terraform.

The stack includes S3 for static hosting, CloudFront for CDN, Route53 for DNS management, and ACM for SSL. CI/CD is handled with GitHub Actions, including environment-based deployment and Terraform planning.
