CERTIFICATIONS

Google Cloud Associate Cloud Engineer

AZ-400: Azure DevOps Engineer Expert

AZ-104: Azure Administrator Associate

AZ-900: Azure Fundamentals

AWS Solutions Architect Associate

AWS Developer Associate

AWS Cloud Practitioner

PROFESSIONAL EXPERIENCE

2025 - Present | HCLTech

Site Reliability Engineer (SRE)

Operated as a SRE consultant supporting enterprise clients, collaborating with globally distributed teams across multiple regions and time zones.

Participated in on-call rotations, managing production incidents while monitoring service health using Splunk and Dynatrace to ensure reliability across GCP and hybrid on-prem environments.

Cloud Platforms: GCP

Tools and Technologies: Bash, Linux, Jenkins, Jira, HashiCorp Vault.

Observability: Splunk, Dynatrace.

2024 - 2025 | Objective

DevOps Engineer / Site Reliability Engineer (SRE)

DevSecOps engineer working on secure, scalable, and automated cloud infrastructure for internal projects and international clients.

Implemented CI/CD pipelines, Kubernetes-based deployments, and IaC practices using Terraform, and core SRE practices focused on observability, monitoring, and system reliability.

Collaborated directly with English-speaking stakeholders to design, maintain, and improve DevOps processes.

Active involvement in Agile practices through regular team syncs, continuous delivery cycles, and workflow management using Kanban boards.

Cloud Platforms: Azure (ACR, AKS, Azure Files, Entra ID); AWS (Cognito, CloudWatch, Lambda, DynamoDB, CloudFront, API Gateway, CloudTrail, Kinesis Data Firehose, SES, IAM, S3, WAF, EKS).

Tools and Technologies: Bash, Linux, Docker, Docker Compose, NGINX, Envoy, Kubernetes (Minikube, Kind, AKS, EKS), Helm, ArgoCD, Jenkins, TeamCity, GitHub, GitLab, GitLab CI, GitHub Actions, Bitbucket, Terraform, HashiCorp Vault, Nexus, External Secrets, JFrog, Maven, Kotlin, RabbitMQ, OWASP Dependency-check, Jira, SonarQube, Trivy, XWiki, Confluence, Kanban.

Observability: Grafana, Prometheus, Loki, Tempo, Mimir, Alloy, OpenCost.

2021 - 2024 | Radio Memory

Cloud Backend Engineer

Developed APIs using Flask and FastAPI (Python) on AWS infrastructure.

Containerized services using Docker, Docker Compose, and provisioned infrastructure with Terraform (IaC).

Built CI/CD pipelines in Jenkins for automated deployment of applications on EC2, Lambda, and ECS.

Implemented unit, integration, and end-to-end tests, while setting up observability with AWS CloudWatch.

Designed e deployed machine learning models for computer vision tasks.

Developed automation and system management scripts using Bash, Python, and Go (Golang).

Cloud Platforms: AWS (API Gateway, EC2, ECS, EBS, EFS, S3, Lambda, SQS, SNS, CloudWatch, XRay, Route53, VPC, IAM, Secrets Manager, Elastic Load Balancer).

Tools and Technologies: Python, Go, Bash, Jenkins, Terraform (IaC), Flask, FastAPI, Pytorch, Numpy, Keras, Pytest, Docker, Docker-Compose, Git, ClearML, Trello, Streamlit.

EDUCATION

2016 - 2023 | Bachelor's Degree in Mechatronics Engineering

University of Brasília (UnB)

Final Project: "Reinforcement Learning applied to VSSS category of Robotic Soccer". (Designed an autonomous agent able of scoring goals through machine learning, Python and Pytorch)

2014 - 2017 | Technician's Degree in Electrotechnics

Technical School of Brasília (ETB)

LANGUAGES

French: Beginner

Spanish: Intermediate

English: Advanced

Portuguese: Native

VOLUNTEER WORK

2018 - 2022 | UnBall Team - Robot Soccer

Competition Team (Autonomous Robots)

Applied Agile methodology and Scrum framework for project management.

Managed financial operations and prepared monthly reports for project contributors.

Developed Python scripts and machine learning algorithms for autonomous robot soccer systems.

Used Linux for software development, robotics programming, and system execution throughout the project.

During the COVID-19 pandemic, helped adapt the team infrastructure for remote robotic competitions by developing and running containerized environments using Docker.

2017 - 2019 | Teaching Assistant at Universit of Brasilia (UnB)

2019 | Introduction to Linear Algebra

2018 | Calculus 3 (Multivariable Differential and Integral Calculus)

2018 | Calculus 2 (Series and Differential Equations)

2017 | Algorithms and Computer Programming

PAPER PUBLICATIONS

2023 | Minimal underactuated synchronization with applications to secure communication

Journal: Communications in Nonlinear Science and Numerical Simulation (Qualis A1)

PERSONAL PROJECTS

Go DevOps Monitoring Stack

Built a complete observability and deployment stack using Go, Docker, Docker Compose, NGINX, Prometheus, Grafana, and Ansible. Implemented a containerized HTTP service with reverse proxying, metrics instrumentation, dashboard provisioning, and automated infrastructure deployment through a single Ansible playbook.

Splunk SPL Exercises

A collection of SPL (Splunk) queries and hands-on exercises demonstrating log analysis, incident detection, and monitoring skills.

Database for Social Network

Utilized Br Model for developing Entity-Relationship and Relational Model diagrams. Applied relational algebra for query applications. Table normalization and use of PostgreSQL as engine.

SQL Data Analysis

Advanced SQL techniques for obtaining Insights in a public relational database.

Personal Website hosted on AWS

Developed my personal website using Angular, HTML5, CSS3, SASS, with automated infrastructure provisioning and deployment on AWS via Terraform.

The stack includes S3 for static hosting, CloudFront for CDN, Route53 for DNS management, and ACM for SSL. CI/CD is handled with GitHub Actions, including environment-based deployment and Terraform planning.
